

FIBERTOWN DR WORKSITE SERVICE OVERVIEW

FIBERTOWN's Private Work Site Recovery Office Suites can be custom tailored to a variety of corporate requirements. We have custom finished thousands of square feet of high availability disaster recovery/worksite recovery office space for Houston and Gulf Coast companies seeking geographic diversity and the convenience of relative proximity – 90 minutes from Downtown Houston.

Our enterprise data center located at the heart of our properties can also play a vital role in corporate disaster recovery preparedness planning. Each of our buildings is linked by fiber to the data center and the many carriers connected to our data center.

Fibertown's value proposition is simple: Customers can easily escape a Houston region hurricane or tropical storm and have a high level of connectivity and redundancy typically available in many corporate offices.

We have provided turnkey DR Hot Site development services – from space and infrastructure design to the provisioning of cross-connects, back-up power, fiber connectivity, access controls, site monitoring, on-site security and provisioning of high capacity circuits back to your headquarters or primary data center for synchronous communications.

FIBERTOWN is located in a revitalized five-block Downtown cultural district within easy walking distance to a hotel, restaurants, shopping, and entertainment.
