Data Note: N/A means not available.

2010-2014 ACS Estimate: The American Community Survey (ACS) replaces census sample data. Esri is releasing the 2010-2014 ACS estimates, five-year period data collected monthly from January 1, 2010 through December 31, 2014. Although the ACS includes many of the subjects previously covered by the decennial census sample, there are significant differences between the two surveys including fundamental differences in survey design and residency rules.

Margin of error (MOE): The MOE is a measure of the variability of the estimate due to sampling error. MOEs enable the data user to measure the range of uncertainty for each estimate with 90 percent confidence. The range of uncertainty is called the confidence interval, and it is calculated by taking the estimate +/- the MOE. For example, if the ACS reports an estimate of 100 with an MOE of +/- 20, then you can be 90 percent certain the value for the whole population falls between 80 and 120.

Reliability: These symbols represent threshold values that Esri has established from the Coefficients of Variation (CV) to designate the usability of the estimates. The CV measures the amount of sampling error relative to the size of the estimate, expressed as a percentage.

- High Reliability: Small CVs (less than or equal to 12 percent) are flagged green to indicate that the sampling error is small relative to the estimate and the estimate is reasonably reliable.
- Medium Reliability: Estimates with CVs between 12 and 40 are flagged yellow-use with caution.
- Low Reliability: Large CVs (over 40 percent) are flagged red to indicate that the sampling error is large relative to the estimate. The estimate is considered very unreliable.

ACS Housing Summary

106 S Bryan Rd, Mission, Texas, 78572
 Ring: 5 mile radius

Prepared by Esri
 Latitude: 26.20430
 Longitude: -98.31139

	2010-2014 ACS Estimate	Percent	MOE(±)	Reliability
OCCUPIED HOUSING UNITS BY HOUSE HEATING FUEL				
Total	46,255	100.0%	1,171	
Utility gas	4,266	9.2%	442	
Bottled, tank, or LP gas	1,244	2.7%	203	
Electricity	39,707	85.8%	1,132	
Fuel oil, kerosene, etc.	28	0.1%	20	
Coal or coke	0	0.0%	0	
Wood	0	0.0%	0	
Solar energy	6	0.0%	15	
Other fuel	61	0.1%	51	
No fuel used	945	2.0%	194	
OCCUPIED HOUSING UNITS BY VEHICLES AVAILABLE				
Total	46,255	100.0%	1,171	
Owner occupied				
No vehicle available	1,401	3.0%	291	
1 vehicle available	9,845	21.3%	679	
2 vehicles available	12,119	26.2%	743	
3 vehicles available	5,077	11.0%	521	
4 vehicles available	1,641	3.5%	288	
5 or more vehicles available	504	1.1%	174	
Renter occupied				
No vehicle available	2,317	5.0%	353	
1 vehicle available	8,240	17.8%	649	
2 vehicles available	4,042	8.7%	489	
3 vehicles available	890	1.9%	209	
4 vehicles available	107	0.2%	80	
5 or more vehicles available	73	0.2%	89	
Average Number of Vehicles Available	N/A		N/A	

Data Note: N/A means not available.

2010-2014 ACS Estimate: The American Community Survey (ACS) replaces census sample data. Esri is releasing the 2010-2014 ACS estimates, five-year period data collected monthly from January 1, 2010 through December 31, 2014. Although the ACS includes many of the subjects previously covered by the decennial census sample, there are significant differences between the two surveys including fundamental differences in survey design and residency rules.

Margin of error (MOE): The MOE is a measure of the variability of the estimate due to sampling error. MOEs enable the data user to measure the range of uncertainty for each estimate with 90 percent confidence. The range of uncertainty is called the confidence interval, and it is calculated by taking the estimate +/- the MOE. For example, if the ACS reports an estimate of 100 with an MOE of +/- 20, then you can be 90 percent certain the value for the whole population falls between 80 and 120.

Reliability: These symbols represent threshold values that Esri has established from the Coefficients of Variation (CV) to designate the usability of the estimates. The CV measures the amount of sampling error relative to the size of the estimate, expressed as a percentage.

- High Reliability: Small CVs (less than or equal to 12 percent) are flagged green to indicate that the sampling error is small relative to the estimate and the estimate is reasonably reliable.
- Medium Reliability: Estimates with CVs between 12 and 40 are flagged yellow-use with caution.
- Low Reliability: Large CVs (over 40 percent) are flagged red to indicate that the sampling error is large relative to the estimate. The estimate is considered very unreliable.
